### DETAILED ACTION

1. This action is in response to applicant's amendment received on 05/09/00.

#### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The examiner take the position that the term "shaft" as broadly claimed is for transmit power and motion by rotation. Applicant's specification on page 10, line 21 states: "The tear bar is mounted in system 10 so that the bar does not rotate". This statement contradict what is considered by the examiner's interpretation of the shaft.

#### *Claim Rejections - 35 USC § 102*

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

Art Unit: 3724

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito et al.

Saito et al. discloses (Fig. 4-5) the invention including a tear bar 16 comprising a first side portion (see Fig. 4, right corner edge) and a second side portion (see Fig. 4, left corner edge), a tapered surface, a center portion, a substantially lateral cross-section, a strip of media 6 having a surface, a first and second side, and a center portion, a plurality of perforations are arranged substantially in a line and a plurality of bridges 6a, corner treatments and wherein the tear bar is formed from an integrally formed shaft having a substantially semi-circular lateral cross-section 16a.

#### *Allowable Subject Matter*

6. Claims 4-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### *Conclusion*

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. J. Q. Sherman et al., L. F. Hageman et al., Kuckhermann, Kimura et al., Hamel, Suuronen et al., Buch, Jr, Nishishita et al. and Baker are cited to show related device.
